

PROPOSED FLATS. CHURCHILL COLLEGE.

The attached drawings show the proposal, and the following notes may explain some aspects of the scheme:-

1. Importance has been attached to each flat having a sunny aspect, and also having a view of the playing fields to the South. Many other dispositions were tried, some in considerable detail, but they all had the disadvantage that the attractive views to the South and South-east were obscured.
2. Total cost including road works and site works, on attached sheet prepared by Messrs. Davis, Belfield & Everest, Chartered Quantity Surveyors.
3. The chapel has been sited to form a court with the existing flats, and so as to be clearly visible from the rest of the College.
4. Heating. In our preliminary discussions Electricity was investigated, but as the spaces to be heated are so small, a serious problem does not arise, apart from running costs.
5. It may seem surprising that the flats which have two Bedrooms have been placed on the first and second floors, but this presents a much more economical solution. The ramp provided would make access with prams possible.
6. As all service rooms are on the North, they act as a barrier to prevent noise of cars arriving late at night from disturbing the Bedrooms.
7. The house plans are it is hoped self-explanatory, and the flat with one Bedroom is shown with the possibility of the Bedroom and Sitting Room opening into one during the day time, but always capable of separation.
8. A private open space was thought desirable for each flat, and this has been achieved by a small court to the Ground Floor Flats and a terrace on the First Floor.
9. The solution presented would be greatly improved if there were four fewer flats. 40 sq. ft. additional area to each floor would probably make a great deal of difference to the daily life of the inhabitants.
